

6. Acknowledgement

During the period of this study, many warm encouragement and ample discussion from Dr. Junko Mizuno of IDE make this cooperation feasible and unforgettable. Her endorsement is highly appreciated. Without her arrangement, we could not have so excellent opportunity to pay a visit to Kuroda Precision Industries Ltd., which is an impressive site with outstanding mindset ranging from technology to management. Many thoughts are creative and generic which can be very helpful to manufacturing factories, of course including mold ones. Also we would like to thank Mr. Pei-Shun Shin, who is the director of Taiwan Mold and Die Industry Association, for his suggestion and arrangement for the visit tour. Without his enthusiastic help, it is impossible to finish this study, especially the part of on site visit in Taiwan.

Last but not the least, we also thank all of those who provide kindly their time and related message during the visit. Based on messages provided, many important issues can be thus deduced and discussed for further study.
